Target (production period) is calculated from the prevalence reported in 2012. Target is set up at 2.0 % for most of the countries, with the exception of the following: Cyprus (11.0 %), Malta (5.5 %), Luxembourg (3.2 %) and Poland (2.6 %). Croatia did not have the relative reduction target for 2013, as 2013 was the first year of reporting for this MS.

(a): S. Typhimurium includes monophasic S. Typhimurium.
